## EPI Company Profile

"Enhancing our environment by preserving water resources for future generations." That's the mission of Environmental Protection, Inc.

For over 25 years that mission has manifested itself in quality products, fair prices, and commitment to service. Originally created in 1980 to serve the oil industry in Michigan, EPI has expanded into a full service geosynthetic supplier having fabricated over 500 million square feet of PVC flexible membrane liners.

Whatever the material, we at EPI are justifiably proud of our commitment to product quality. All materials meet or exceed requirements of ASTM D-7176 Standard Specification for PVC geomembranes used in buried applications. 100% of our factory seams are inspected twice before any liner leaves the factory. A continuous SPC quality control program and systematic analysis of on-site test ponds are two of the many other ways EPI goes to great lengths to ensure that engineers, regulatory officials, and end-users can act with confidence when selecting EPI geomembranes. Be sure to see our website at [www.geomembrane.com](http://www.geomembrane.com)

for the latest in PVC technical developments and information.

EPI offers a variety of services to fit any need. Our experienced staff can provide panel design and layout services, and are always available to answer technical questions on geomembranes. Our unique manufacturing process enables us to fabricate irregular shaped liner panels, thereby reducing the amount of waste material necessary for irregular shaped containments, a process which results in significant dollar savings.

EPI also has experienced crews available with the equipment and know-how to efficiently install any liner project. EPI has pioneered dual track thermal welding and air channel testing of PVC, culminating in the establishment of ASTM D-7177 standard specification for testing PVC weld continuity and strength. All of this provides you a "single source" for fabrication, delivery and installation of all your geomembrane projects.

For all your geosynthetic needs, we are the source whose name is its pledge... Environmental Protection.

*Preserving water resources for future generations*
