Furniture Row Shopping Center

Problem: A furniture store needs a fire sprinkler system but there is no municipal water service available.

Solution: Build a reservoir under the building lined with 60 mil PVC from EPI. That was the answer for the Furniture Row Shopping Center store in Billings, Montana. A 26' x 48' x 8' deep poured concrete tank was constructed in one corner of the building. EPI provided a one piece, 45' x 68' sixty mil PVC liner panel for the interior of the tank. The liner was unfolded in place and was anchored around the top perimeter with aluminum batten. Total time to install the liner and batten: 6 hours!

77,000 gallons of water for fire protection at the store.

For 25 years EPI has been helping our customers solve containment problems in all types of environments. When you have an unusual situation, feel free to give us a call. Maybe we can offer a solution you haven't thought of yet.
