Ecuador Welcomes EPI

Quito, Ecuador

Filmtex S.A. of Bogotá, Colombia presented a half day program on the manufacturing, fabrication, installation and testing of PVC geomembrane liners. The session was attended by educators, engineers, construction and oil industry personnel. 70+ people attended the multimedia technical presentation at the JW Marriot hotel in downtown Quito.

Filmtex provided simultaneous translation from English to Spanish for the presentation made by Fred Rohe. Filmtex, a manufacturer of all types of PVC films, fabricates PVC geomembrane lining

materials using EPI's proprietary PVC liner fabrication methods.

Mr. Hernan Galeano, President of Milempo, S.A. in Quito, was the host of the program and provided typical outstanding hospitality to all of the attendees. He also graciously provided Dan and Fred Rohe a personal tour of the old city of Quito and a visit to Linea del Ecuador – “the Equator Line”. We enjoyed a traditional local meal for lunch at a restaurant located directly on the equator. It is interesting to note that EPI in Mancelona, Michigan is located on the 45th parallel, exactly half way between the equator and the North Pole.

Bogotá, Colombia

EPI will be posting information on our website soon about newly developed PVC tunnel lining material available from Filmtex. The two color material (black with one surface white) is available in 60, 80, and 120 mil thickness and also can be provided with non-woven geotextile laminated to one side. If you have questions about this product, contact Carlos Tchiprout at Filmtex, or call EPI anytime.
