## EPI Fabricates Specialty Liners

### Happy Halloween!

Do you ever need PVC in rolls? EPI can supply you with fabricated panels rolled on a 6" fiberboard core. 30 mil PVC is available in sizes up to 12.5 feet wide and 200 feet long. Other thickness' and sizes are available, with a weight limit of 500 pounds per panel. These small panels are easily deployed by inserting a pipe in the core or by simply unrolling the panel on the ground. Small panels that are less than 1,000 square feet are now automatically rolled on a core.

EPI can also supply you with PVC geomembrane in narrow widths. Starting with 76" width, EPI can slit the PVC lengthwise to provide you with the width required for your special

project details. Contact us for a quotation on your specific requirements.

Environmental Protection, Inc. was featured in an article in the environmental section of The Business News. If you would like to see what The Business News had to say about EPI, visit their website [www.westshorepub.com](http://www.westshorepub.com) click on past issues, scroll down to Environment, then click on the article "EPI's Products Really Hold Water". We were very

pleased with the coverage of EPI by this news organization.

Are you planning to build an ice rink for the ice skaters in your neighborhood this winter? If you are, check with EPI. We have a supply of white, 20 mil PVC material that is ideal for building a backyard or parking lot ice rink. Small or large, we can fabricate a liner that will conserve the water and cut down the amount melting on sunny days, compared to black liners.
